

This is a brain.

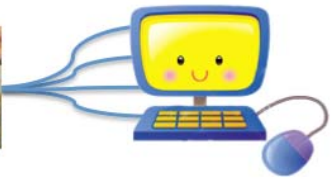

Your brain helps you walk and talk and learn.

The brain is made up of neurons, like this one.

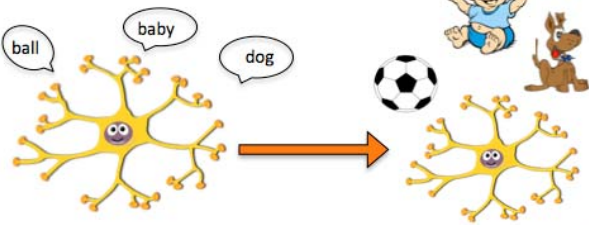

We use a special hat and computer to hear what the neurons are saying.

Electricity travels along wires from the special hat to our computer.

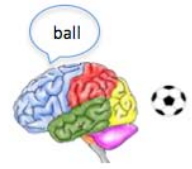

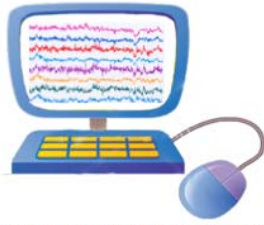

Neurons talk to each other by sending small amounts of electricity – just like a phone.

Now we can see your brain waves!

Brain waves tell us how fast your brain works and what your brain knows about words and pictures.

When you visit the lab you will get a picture in the special hat and a copy of your brain waves.

ME AND MY SPECIAL HAT

MY BRAIN WAVES
